Profile

I am gentleman with an urge of attaining knowledge in different disciplines from medicine, law, computing, architecture, art to finance. Though computing and art are my major interests. My passion for computing dates back to my childhood. Having a computer stationed home during this time made me familiar with working with computers. For the passion in art, my mother's appreciation for artworks nourished it.

I believe art is a tool for creativity. I find combining my two passions equips me with tools to quickly come up with solutions to challenges I encounter in my day to day life. Generally, I am a social, humble, creative, and an open-minded person.
